International Technical Data Available to Fleets on TMC FleetPortal

Alexandria, VA – The Technology & Maintenance Council of the American Trucking Associations announced today that it has reached a non-exclusive data exchange agreement with International Truck and Engine Corporation.

Under the terms of this agreement, International customers with an ISIS[®] CD Subscription will now be able to use *TMC FleetPortal* to gain direct access to International technical publications and service information for their fleets, including Service Manuals, Service Bulletins, Campaign Notices, Warranty Information, TIPS, Standard Repair Times, Operator's Manuals, and other publications. Fleets that subscribe to *TMC FleetPortal* will have access to International technical data pertaining to their specific fleet equipment.

Julie Espich, Manager of National Service for International commented, "Based upon feedback gathered from our customers, we identified a need to help fleets improve their efficiency in accessing technical information. We recognized this cooperative agreement with the TMC as a means by which to complement our customer service offerings."

"We're very pleased that International is taking this step," Carl Kirk, TMC Executive Director and Vice President of Councils for ATA, said of the new agreement. "International is a progressive member of the trucking community and is clearly committed to meeting the needs of its customers. They listened to their customers and provided this new option of information access via *TMC FleetPortal* to help their customers improve efficiency."

Larger fleets that operate equipment from more than one OEM have a greater challenge in managing the vast amount of service and technical information received from multiple sources. *TMC FleetPortal* was originally created to help resolve this problem. It provides a single point of entry to all information from multiple OEMs and suppliers, as well as any internal documents related to maintenance of the fleet.

By providing an information portal for maintenance data from all of a fleet's original equipment manufacturers, TMC FleetPortal can significantly reduce the time maintenance professionals spend searching for technical information. Fleet technicians will no longer need to log in to multiple web sites with different passwords and methods of finding data. They can simply log on to the *TMC FleetPortal* system with a single username and password to access all of the information needed, regardless of manufacturer.

Sponsored by the American Trucking Associations Technology and Maintenance Council (TMC), *TMC FleetPortal* provides fleet maintenance personnel with online access to illustrated parts catalogs, repair and maintenance manuals, service bulletins, parts information letters, and internally generated documents as well as TMC Recommended Practices and Vehicle Maintenance Reporting Standards codes (VMRS 2000™).

TMC FleetPortal is operated on behalf of ATA through an arrangement with Continental DataGraphics (CDG), a Boeing Company subsidiary (www.cdgnow.com). CDG is a leader in digital information management solutions for trucking, aviation, and other industries.

The American Trucking Associations is the largest national trade association for the trucking industry (www.truckline.com). Through a federation of other trucking groups, industry-related conferences and its 50 affiliated state trucking associations, ATA represents more than 37,000 members covering every type of motor carrier in the United States.

International Truck and Engine Corporation is the operating company of Navistar International Corporation (NYSE: NAV). The company produces International® brand commercial trucks, mid-range diesel engines and IC brand school buses and is a private label designer and manufacturer of diesel engines for the pickup truck, van and SUV markets. A wholly owned subsidiary offers financing services. Additional information is available at: <http://www.internationaldelivers.com>.
