

CDG Adds Mekel Mach IV Microfilm Scanner to Expand Production Capabilities

December 1, 2006 – Cypress, CA – Continental DataGraphics (CDG), a wholly owned subsidiary of The Boeing Company, announced that it recently added a Mekel Mach IV microfilm scanner to its production operations to expand its high volume microfilm scanning capabilities. The Mekel Mach IV is capable of scanning up to 600 images per minute and can be used on both 16 and 35 mm roll film with superior functionality, speed and image quality.

By adding the Mach IV, CDG continues to utilize the most advanced technology available to provide its customers with the highest quality and most efficient document imaging solutions available.

To request additional information regarding 16mm or 35mm microfilm scanning services or other CDG Digital Document Solutions, contact marketing@cdgnow.com, or visit the CDG web site at www.cdgnow.com.

About CDG

CDG is a wholly owned subsidiary of The Boeing Company. Established in 1969, CDG provides a comprehensive suite of products and services for the creation, conversion, management and delivery of information. CDG's offerings include document and content management solutions, digital imaging services, secure application and data hosting services, professional records and document management consulting, software development and systems integration, and technical authoring and illustration services. CDG utilizes an ISO 9001:2000 certified quality management system in its production and service operations, and has stringent security measures in place to provide highly secure processing of confidential and DoD classified level information for its customers. CDG has production and customer service facilities located in multiple locations throughout the U.S. and the U.K.
